falciparum and Candida albicans are used to detect infections of these
                                                                                                           The invention relates to identification and use of telomerase reverse transcriptase (TERT) genes and proteins isolated from Plasmodium falciparum, Candida albicans and rice. TERT gene is also called as ever shorter telomere (EST) gene. TERT genes are used to detect P. falciparum and C. albicans infection in mammals. They are also used to diagnose the state of an infection in a patient and the relative amount of the pathogen in a cell, tissue, organ or organism. The potential binding partners and modulators of the activity of TERT genes and proteins are used to inhibit or promote growth of the pathogens and hence are used to treat e.g. stomach cancer, malaria and vaginal candidiasis in
                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is Plasmodium falciparum TERT full length
                                                                      Page 104-111; 138pp; English
                              pathogens in mammals

dner M, Venter JC;		
Plasmodium falciparum, useful as antimalarial vaccines and in the diagnosis of P.falciparum infection . Disclosure: Page 285-291; 577pp; English. The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum. Also described are: (I) nucleocitde sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II). (I) and (II) are useful for the development of vaccines against P. falciparum infection. (I) and polycional antitisera or a monoclonal antibody raised to imminocens comprising the sequences of (I) are	0 A A A A A A A A A A A A A A A A A A A	S66 KKDEEQLFEKKITKDENKPDEKILEVSDIVKOVQKVLLMNKIDELKKTQLILKNVEL. S55 SNNDYNIFYEDGEINKDELKN
useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in P. falciparum. Sequencing of the Plasmodium chromosome 2 and the Subsequent identification of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasite lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito parts of the world, and there is a pressing need for vaccines and new farges have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new and protein sequences given in the present invention, but which are not specifically mentioned within the specification.	6 6 6 6 6 6	746 VPVPEAKAQVPTPPAPAVNNKTENVSKLDYL

The protein has at least one of plus end-directed microtubule motor activity, ATPase (adenosine triphosphatase) activity and microtubule binding activity. CENP-E is the motor that powers chromosome microtubule binding activity. CENP-E is the motor that powers chromosome of chromosomes during mitosis. Modulators of CENP-E can thus control cell proliferation. Agents that modulators of CENP-E can thus control therapeutic, bioagricultural and diagnostic agents, e.g. for treatment of unwanted cell proliferation (typical of many examples are tumors and metastases; vascular malfunction; inflammatory and immune diseases; anglogenesis; hypertension; restenosis; and fungal infections), also as plant-protection agents (selective herbicides, fungalides and insecticides) and plant growth regulators or activators for improving yields. CENP-E is also a diagnostic marker for dividing cells, including
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1206
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1052

The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum. Chromosome 2 of the human malarial parasite, Plasmodium falciparum. Chromosome 2 of the human malarial parasite, Plasmodium falciparum. Chromosome 2 of II) and (II) and (II) are useful for the development of vaccines against (I) and (II) are useful for the development of vaccines against (II) and infection. (I) and polyclonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in conspectanding of the Plasmodium chromosome 2 and the subsequent identification of proteins ancoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasite biology, a process hampered by the resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new cruger. Ash/7078 to AAA/70287 and AABIB352 represent nucleotide and protein sequences given in the present invention, but which are not second consecutions and the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis lifection.

NB. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site.

The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum. Also described are: (I) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II).
(I) and (II) are useful for the development of vaccines against antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat for prevent P. falciparum infection, or they can be used to identify drug resistance in P. falciparum. Sequencing of the Plasmodium chromosome 2 and the subsequent identification of proteins encoded by It will help to expand

our understanding of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA70078 to AAA70078 and AAB1814 to AAB18352 represent nucleotide and protein sequences given in the present invention, but which are not specifically mentioned within the specification.

The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum. Also described are: (I) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II).

C (I) and (II) are useful for the development of vaccines against P. falciparum infection or a monochonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in confection, or they can be used to identify drug resistance in subsequent identification of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasite biology, a process hampered by the vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. Ama70078 to ham70287 and Ama181852 represent nucleotide and protein sequences given in the present invention, but which are not specifically mentioned within the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                86;

(I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in P. falciparum. Sequencing of the Plasmodium chromosome 2 and the subsequent identification of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasite lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA70078 to AAA70287 and AAB18144 to AAB18352 represent nucleotide and protein sequences given in the present invention, but which are not specifically mentioned within the specification. 72; TFYNESFTNFVKSKADDINSL---NDESKRKKLEEDINKLKKTLQLSFDLYNKYKLKLER 1017 471 : | | | | | : : | | : | : | | 328

                                                                                                                                                                                                                                                                                          The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous system, such as peripheral nervous system, as so and a localised neuropathies and central nervous system diseases, aunotropathy and lateral sclerosis, and SNy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and CNNS disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the printed specification.

Infection, or they can be used to identify drug resistance in the control of the plasmodium chromosome 2 and the subsequent identification of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many drugs. AAA70078 to AAA7028 and AAB1814 to AAB18352 represent nucleotide specifically mentioned within the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum. Also described are: (I) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II).

(I) and (II) are useful for the development of vaccines against antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins) and and the identification of drugs to treat or prevent P. falciparum furthermore.
                                                                                                                                                                                                                                                             chromosome 2; human malaria parasite; vaccine; protozoacide; infection; insecticide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     parasite,

The invention relates to recombinant multivalent proteins (I) that
stimulate an immune response to Plasmodium vivax. (I) comprises antigenic
determinants, fragments or conservative substitutions, derived from more
than one stage in a life cycle of a Plasmodium vivax parasite. (I) is
useful as a vaccine for stimulating an immune response, specifically a
protective immune response that confers increased resistance to infection
by Plasmodium parasites, such as p. vivax. (I) is especially useful in
the treatment, prevention and reduction of malarial infection, as
the treatment, prevention and reduction of malarial infection, as
the treatment, prevention and reduction of malarial infection, as
the treatment, prevention and reduction of malarial parasite. The antibodies produced are useful for
stages of the malarial parasite. The antibodies produced are useful for
the detection or measurement of antigenic epitopes derived from one or
more stages in a life cycle of a parasite, particularly P. vivax. The
vaccine comprising the recombinant proteins, is cost-effective, health-
promoting intervention for controlling, preventing or treating the
incidence of malaria. The present sequence represents the amino acid
sequence of the recombinant protein Vivaclp, a multivalent and
multistage vaccine against P. vivax.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents a Borrelia burgdorferi (Bb) protein of the invention, which is suitable for use in a vaccine. The Bb polypeptides can be used in vaccines for eliciting protective antibodies to members the Borrelia genus, particularly for the use against Lyme disease in humans and animals. They can be used for preventing or attenuating an infection caused by a member of the Borrelia genus. The products can albe used for detection of members of the Borrelia genus.

Also described are: (1) nucletide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II).

Vaccines against P. falciparum infection comprising (I) or (II).

CC (I) and (II) are useful for the development of vaccines against

D. falciparum infection. (I) and polyclonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum (C) (aspecially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum (C) (I) (especially when they can be used to identify drug resistance in flection, or they can be used to identify drug resistance in complexity of the parasite biology, a process hampered by the subsequent identification of proteins encoded by it will help to expand cour understanding of parasite biology, a process hampered by the complexity of the parasite lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA70078 to AAA70287 and AAB18135 represent nucleotide and protein sequences given in the present invention, but which are not specifically mentioned within the specification. present invention describes proteins and their fragments (I) encoc chromosome 2 of the human malarial parasite, Plasmodium falciparum Disclosure; Page 395-401; 577pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gg
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     57;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum.

Also described are: (I) nucleotide sequences (II) encoding (I): and (2) vaccines against P. falciparum infection comprising (I) or (II).

C (I) and (II) are useful for the development of vaccines against CC (I) and infection. (I) and polyclonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, CC useful in the detection of infection with P. falciparum. Furthermore, CC (I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in curedation of proteins encoded by it will help to expand or subsequent identification of proteins encoded by it will help to expand or understanding of parasitic biology, a process hampered by the CC complexity of the parasitic lifecycle, and provide new targets for complexity of the parasitic lifecycle, and provide new targets for complexity of the parasitic lifecycle, and provide new targets for complexity of the world, and there is a pressing need for vaccines and mean coresistance to insecticides have led to a resurgence of malaria in many creatings. The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum, Also described are: (I) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II).

Cand (II) are useful for the development of vaccines against P. falciparum infection or a monochonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) despecially when they are rifins or secreted or membrane proteins) can aid the identification of infection with P. falciparum. Furthermore, infection, or they can be used to identify drug resistance in infection, or they can be used to identify drug resistance in confiction of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the subsequent identification of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasite infection, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA70287 en AAB18352 represent nucleotide and protein sequences given in the present invention, but which are not specifically mentioned within the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  78;
